Hiring Manager
Parsons
MacDill Air Force Base
Tampa, FL

Dear Hiring Manager,

I am applying for the Full Stack Software Engineer - Secret position at Parsons. I develop and support secure, customer-focused applications across aerospace and defense and financial services, with experience in React and TypeScript interfaces, Java, Python UI applications, and CI/CD delivery. My work spans requirements, development, integration, testing, deployment, and production support. I am especially interested in contributing to Parsons' work delivering secure, resilient software for critical U.S. Government and Department of Defense missions.

At JPMorgan Chase, I developed production React and TypeScript front-end components and Java/Spring Boot microservices using test-driven development. I deployed services to Kubernetes, built an administrative tool that streamlined file management, and reviewed pull requests. In Level 3 production support, I troubleshot issues and helped identify root causes across application components.

In my current role at Collins Aerospace, I write and refine software requirements and develop, integrate, and test software for mission-critical aerospace and defense systems. I build multiple Python UI applications in parallel with Qt Designer, tailoring them to distinct customer workflows and collaborating with software and systems engineers to troubleshoot integrations with hardware and simulators. I also lead DevOps work maintaining CI/CD pipelines and build workflows for applications written in multiple languages, and manage CloudStack instances and images in an air-gapped network. This work has strengthened my experience with React and TypeScript, Java, RESTful services, relational and NoSQL databases, Docker and Kubernetes, Git, automated testing, and CI/CD and secure software delivery in a SCIF environment.

I would welcome the opportunity to discuss how my full-stack development, integration, testing, and secure-delivery experience could contribute to Parsons's Federal Solutions team. Thank you for your consideration.

I hold an active DoD Top Secret (TS) clearance and bring experience developing software in secure, mission-critical environments.

Sincerely,
Ilya Aronov

Full Stack Developer
