Hiring Manager
MANTECH
Tampa, FL

Dear Hiring Manager,

I am applying for the Full Stack Developer role at MANTECH. I bring experience delivering front-end and back-end applications, cloud-based services, and production support across financial services and aerospace and defense. My background includes React and TypeScript interfaces, Java/Spring Boot services, Python applications, and CI/CD workflows. I am especially interested in contributing to my experience building full-stack applications and supporting secure software delivery in MANTECH's mission of delivering high-quality, efficient, and user-friendly solutions for government and defense clients.

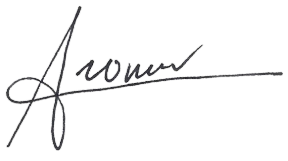

At JPMorgan Chase, I developed React and TypeScript front-end components and Java/Spring Boot microservices, deployed services to Kubernetes, and built an administrative tool that streamlined file management. I also provided Level 3 production support, diagnosing and resolving critical issues.

In my current role at Collins Aerospace, I develop and test software for mission-critical aerospace and defense applications. I write software requirements, build Python UI applications for distinct customer use cases, and lead a DevOps team maintaining CI/CD pipelines and build workflows for applications written in multiple languages. I also manage CloudStack instances and images in an air-gapped network. My experience with Python UI development, React/TypeScript, Java/Spring Boot, software requirements, secure mission-critical work, CI/CD leadership, Git, and Kubernetes supports the reliability and delivery needs of this role.

I would welcome the opportunity to discuss how my full-stack experience could contribute to MANTECH. Thank you for your consideration.

I hold an active DoD Top Secret (TS) clearance and bring experience developing software in secure, mission-critical environments.

Sincerely,
Ilya Aronov

Full Stack Developer
